

Built-up Premium Metal Letters

Beautifully constructed letters and logos with fully blended edges

Product Brochure

A flawless finish that's completely smooth to the touch

Meticulously crafted, our Premium built-up metal letters are created in a range of styles and materials.

The fully blended edges of these letters produce a flawless finish that's completely smooth to the touch. In an intricate production process, the soldered edge, where the letter face meets the return, is first filed and then highly polished. This method creates a continuous soldered seam which eliminates all sharp points to create a sleek finish.

Letters and logos are possible at just 50mm in height, with 6mm returns and stroke widths as narrow as 3mm. Created in stainless steel, copper, brass and titanium, finishes include satin, polished, painted and bead blasted effects along with copper verdigris and a variety of other options.

For exterior applications, gold titanium offers an attractive alternative to brass whilst bronze titanium provides an alternative to copper. Halo illumination can be added from our stocked range of LED modules and a range of fixings are available dependent on installation requirements.

The letters are particularly suited to eye level signage as seen in the receptions of law firms and architectural practices where the detail of the letters can be appreciated.

Key features

- Superior quality letters with fully blended edges
 - Letters and logos as small as 50mm in height
 - Create prestigious eye level signage
 - Letter styles include flat faced, rim and return, rimless, prismatic / bevelled
 - Available in stainless steel, copper, brass, titanium
